To the running of this website, we need your help to support us. In order to find the necessary file, choose a device you need Erisson repair manuals to fix your devices, such as notebooks, cameras, mobiles, printers, scanners, plasmas, and more. In this case you can contact us and we will try to find it. Schematic diagrams are needed for the maintenance and repair of different equipment and electromechanical systems. A schematic diagram represents the components of a certain system. They are not shop manuals which come with the products. Information, contained in repair manuals is similar to shop manuals. A service manual contains information related to the methodology of servicing and maintaining an equipment. Service Manual is typically provided with the product. It is necessary for maintenance the equipment in good working order. It contains circuit diagrams schemas etc. We have proficiency in offering quality services in order to provide our customers most satisfactory and value added services help them to meet their requirements. It also usually contains parts catalog. After placing order well send You download instructions on Your email. See below for delivery information. To avoid such hazards, the high voltage must not be above the specified limit. The normal value of the high voltage of this receiver is 24KV at zero beam current minimum brightness under 220V AC power source. The high voltage must not, under any circumstances, exceed 30KV. 2. Each time a receiver requires servicing, the high voltage should be checked following the High Voltage Check procedure in this manual.

<http://www.drupalitalia.org/node/69222>

It is recommended the reading of the high voltage should be recorded as a part of the service record. It is important to use an accurate and reliable high voltage meter. 3. The primary source of XRay Radiation in this TV receiver is the picture tube. For continued XRay Radiation protection, the replacement tube must be exactly the same type tube as specified in the part list. 4. Some parts in

this receiver have special safety related characteristics for XRay Radiation protection. For continued safety, parts replacement should be undertaken only after referring to the Product Safety Notice. SAFETY PRECAUTION Warning Service should not be attempted by anyone unfamiliar with necessary precaution on this receiver. The following are the necessary precautions observed before servicing this chassis. 1. Since the power supply circuit of this receiver is directly connected to the AC power line, an isolation transformer should be used during any dynamic service to avoid possible shock hazard. 2. Always discharge the picture tube anode to the CRT conductive coating before handling the picture tube. The picture tube is highly evacuated and if broken, glass fragment will be violently expelled. PRODUCT SAFETY NOTICE Many electrical and mechanical parts in this chassis have special safety related characteristics. These characteristics are often passed unnoticed by a visual inspection and the XRay Radiation protection afforded by them cannot necessarily be obtained by using replacement components rated for high wattage, etc. Replaced parts which have these special safety characteristics are identified in this manual and its supplements, electrical components having such features are shaded on the schematic diagram and the part list. Before replacing any of these components, read the part list in this manual carefully.

<http://8forwine.com/images/canon-mp-120-manual.pdf>

The use of substitute replacement parts, which do not have the same safety characteristics, as specified in the part list may create shock, fire, and XRay Radiation or other hazards. Pattern Generator outputs 38.9MHz R.F. signal and connects to tuner output terminal or pin5 of saw filter. 1.3. Connect Digital voltmeter across C227. Connect Sweep Signal Generator to tuner IF output terminal oscilloscope VIN terminal connects to C109. TV SET will go to factory mode. Press TIMER key to go to the next factory menu. FOCUS ADJUSTMENT. 2.4. Receive monoscope pattern. 2.5. Set TV to work in dynamic status. 2.6. Adjust the focus knob of FBT to get the clearest picture. Press adjustment keys, and then go to automatic white balance adjustment. 4.3. After adjusting well, remove the 6 Pin Service flat cable. B WHITE BALANCE ADJUSTMENT APPLIED WHEN SERVICING 4.4. Set the TV set to AV mode. Receive black white pattern Color Temperature test patte of 13 Download Embed Size px. BEKO, BEKO chassis LC. BEKO, Power supply schematic.
