The tool speed can be controlled from the minimum to the maximum nameplate RPM by the pressure you apply to the trigger. Apply more pressure to increase the speed and release pressure to decrease speed. This accurate speed control enables you to drill without center punching. It also permits you to use as a power screwdriver. Accessories are available for driving screws as well as running bolts and nuts. Pull outward on the accessory to be certain it is locked into the bit holder Fig. 2. Avoid contact with skin All accessories should be wiped clean after removing. The VarioLock position is intended for use with chipping bits such as bull points, spades, gouges, etc. Next, rotate the locking sleeve, along with the accessory, to the desired position. Then turn the selector lever to the "hammer only" setting and slightly turn the locking sleeve to have it automatically lock into a definite position. I have researched the model you have provided and have found the part you are looking for is Part Number 1610905016. Hope this helps! Is the Shaft Sealing Ring, part number 1610283023, still in place. It sounds like the Quick Change Chuck, part number 1618598175, needs to be replaced. I hope this helps! Bosch hammer SDSplus 11236VS We recommend contacting Bosch directly at 8005035028. Thank you for your question and good luck with your repair! Remove the back cover of the handle. Make a wiring diagram of all the switch wires. Remove the wires from the old switch, then install them in the new switch. And replace the back cover. I hope this helps. Any ideas what it could be Thx Here is a video that will show you how to remove it easily. These tools have the same selector knob as yours. WJA Noticed the motor turned but the bearing flange wasnt. Replaced the bearing flange and all is as good as new. Thx for your help There is not a VS dial. The

variable speed is controlled by the 2607200578 OnOff Switch. WJA I need to find a new dial.If not, can you tell me exactly what parts it includes.

Thanks.<http://saigonradio.com/userfiles/commercial-building-operations-manual.xml>

See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. This drill even though is heavy has excellent

balance. Compared to the hammer drill, the extra weight actually reduces the vibration and acts as a stabilizer. The depth gauge came in handy for this task. The other awesome feature was that I was able to switch it to hammer only mode when I needed to remove about 400 sqft of tile flooring. I don't think I would have been able to do it in 2 days without it. The thinset residue was a total PITA and this thing chiseled it right off without damaging the concrete. The case although slightly flimsy is large enough to hold extra SHDS bits, lube, and other accessories. The plastic used for the case is probably prone to cracking so I would advise to treat it with a bit more care. That's really the only downside to this product. One word of advice. The dust that is generated enters the ventilation ports of this tool so it's a good idea to blow out the buildup with compressed air. Otherwise, the motor will become hot and this will reduce the life of the tool. I noticed this when I was removing tile and the thinset just caked onto the vents and the tool motor got extremely hot after only 10 minutes of continuous use rather than 2030 minutes. None the less the unit works great and does just what they say, I think I just picked the wrong one. Please try again later. Contractor 5.0 out of 5 stars I work it hard but I take care of it too. Please try again later. Please try again later. Rafael Campuzano 2.0 out of 5 stars Please try again later. Please try again later. Chris 5.0 out of 5 stars Please try again later. Please try again later. SL 3.0 out of 5 stars The chuck design made it very difficult to change bits. There is also no trigger lock so you have to manually hold the trigger all the time and some of these hammer drill type jobs can be long.

<http://foot-five.com/images/canon-mx310-on-screen-manual.pdf>

It took 15 minutes per hole, it got pretty hot, the bit wobbled some always but not enough to screw up the holes and I had to hold the trigger constantly which was a pain. It worked so I was happy but a few things could be improved. The wobble was the biggest concern. If you need perfect holes this will not do it. Please try again later. Please try again later. David 5.0 out of 5 stars A good choice for anyone that wants quality and a good price. Please try again later. Please try again later. Dar 3.0 out of 5 stars Bosch makes some good drills the Bulldog, for instance but this ain't one of them. Bosch has poor customer service in my opinion compared with Dewalt. Their online customer service Rep is not a Tech but more of a go between who must consult with a Tech to answer any questions. Please try again later. Please try again later. LBBC 5.0 out of 5 stars Granite is much harder than concrete, and I find that this tool does a very good job, requiring about 3 minutes drilling time per hole. When drilling granite, finding the right pressure to apply to the tool is critical, unlike in concrete where only light pressure is required, also important is keeping the bit centred in the hole. I have probably drilled a couple of hundred holes, and the 11236VS continues to perform smoothly and flawlessly. I keep a portable fan blowing across the hole to direct dust away from the hole and away from me, and it helps to cool the bit and tool as well. Please try again later. Please try again later. Ameshous 5.0 out of 5 stars Knowing the difficult job ahead, I declined, however decided to purchase the same model he carries in his truck. Online search yielded Amazon's offer and I purchased from them at a substantial savings. I have used the tool as prescribed to remove 30 year old ceramic tile from my concrete floor and it performed beautifully. I would recommend this tool to anyone in the trades or a homeowner who wants to do the work themselves.

Sammy58 5.0 out of 5 stars The first job I used it on, my employee and I both couldn't keep the smiles off our faces. This tool is a great buy for the money. Buy this tool. Please try again later. Please try again later. Jim Hinkle 5.0 out of 5 stars I bought it for use in my gold mine in the early 1990s and it has never let me down. I use it extensively for both drilling and chipping and have never done a thing to maintain it other than lube the shank of the bit. The thing is covered in dried on mud and dirt and still operates like it was new. I was surprised to see some reviews mention the hammer isn't that great for chipping. It has had the slop in the chuck

people are talking about since it was new. There is no way that's a problem if it has operated that way for 20 years. Please try again later. Please try again later. You can unsubscribe at anytime. Failure to follow the warnings Cluttered or dark areas invite accidents. Power tools create sparks

which may ignite the dust or fumes. Distractions can cause you to lose control. Never modify the plug in any way. Do not use any adapter plugs with earthed grounded power tools. Unmodified plugs and matching outlets will reduce risk of electric shock. There is an increased risk of electric shock if your body is earthed or grounded. Water entering a power tool will increase the risk of electric shock. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock. Use of a cord suitable for outdoor use reduces the risk of electric shock. Use of a GFCI reduce the risk of electric shock. While the tool may appear to work, the electrical components of the AC rated tool are likely to fail and create a hazard to the operator. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury. Always wear eye protection. Protective equipment such as dust mask, nonskid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries. Carrying power tools with your finger on the switch or plugging in power tools that have the switch on invites accidents. A wrench or a key left attached to a rotating part of the power tool may result in personal injury. This enables better control of the power tool in unexpected situations. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewelry or long hair can be caught in moving parts. Use of dust collection can reduce dustrelated hazards. Slippery hands cannot safely control the power tool. Use the correct power tool for your application.

The correct power tool will do the job better and safer at the rate for which it was designed. Any power tool that cannot be controlled with the switch is dangerous and must be repaired. Such preventive safety measures reduce the risk of starting the power tool accidentally. Power tools are dangerous in the hands of untrained users. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tools operation. If damaged, have the power tool repaired before use. Properly maintained cutting tools with sharp cutting Use of the power tool for operations different from those intended could result in a hazardous situation. Holding the work by hand or against your body is unstable and may lead to loss of control. This will ensure that the safety of the power tool is maintained. When cleaning a tool be careful not to disassemble any portion of the tool since internal wires may be misplaced or pinched or safety guard return springs may be improperly mounted. Certain cleaning agents such as gasoline, carbon tetrachloride, ammonia, etc. Loss of control can cause personal injury. Holding the work by hand or against your body is unstable and may lead to loss of control. If this situation is unavoidable, disconnect all fuses or circuit breakers feeding this worksite. Water entering an electrical device may cause electrocution. Never attempt to operate this tool with one hand. The slip clutch engages if you firmly control the tool during a torque reaction or kickback. Use a dust mask or respirator for applications which generate dust. Safety goggles or eye protection will help deflect fragments of the material that may be thrown toward your face and eyes. Dust generated or gases released from the material you are cutting i.e. asbestos insulated pipes, radon may cause respiratory difficulties. Vibration caused by hammerdrill action may be harmful to your hands and arms. Do not wrap the cord around your arm or wrist.

If cord becomes entangled with the spinning bit it could entrap you causing serious personal injury. Should the bit become bound or jammed in the work, the reaction torque of the tool could crush your hand or leg. Fragments of metal from the bit could dislodge and strike you or bystanders. Dull or damaged bits have a greater tendency to bind in the workpiece. The spinning drill bit may become entangled with clothing and injury may result. Some examples of these chemicals are To reduce your exposure to these chemicals work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles. Please study them and learn their meaning. Proper interpretation of these symbols will allow you to operate the tool better and safer. Such preventive safety The tool speed can be

controlled from the minimum to the maximum nameplate RPM by the pressure you apply to the trigger. Accessories are available for driving screws as well as running bolts and nuts. Pull outward on the accessory to be certain it is locked into the bit holder Fig. 2. **WARNING** use. Avoid contact with skin All accessories should be wiped clean after removing. The VarioLock position is intended for use with chipping bits such as bull points, spades, gouges, etc. Next, rotate the locking sleeve, along with the accessory, to the desired position. Then turn the selector lever to the "hammer only" setting and slightly turn the locking sleeve to have it automatically lock into a definite position. Next rotate the bit holder's locking sleeve clockwise until it stops. Then press slightly inward towards back of tool until it locks in place. The output spindle will stop rotating if the accessory binds and overloads the tool. Depending on the room temperature, this time may vary from approximately 15 seconds 90F to 2 minutes 32F. A new hammer requires a breakin period before full performance is realized.

This period may require up to 5 hours of operation. The long wear and efficient operation of the BOSCH hammers will more than justify the cost for tools of this type. As earlier pointed out, sharp accessories as well as clean air vents are necessary for efficient operation. Establish and follow a set maintenance program. **WARNING** performed by unauth We recommend that all tool service be performed by a Bosch Factory Service Center or Authorized Bosch Service Station. It is recommended that tools with gears be regreased with a special gear lubricant at every brush change. To maintain peak efficiency of the motor, we recommend every two to six months the brushes be examined. Only genuine Bosch replacement brushes specially designed for your tool should be used. Bearings which become noisy due to heavy load or very abrasive material cutting should be replaced at once to avoid overheating or motor failure. **WARNING** disconnect the tool from The tool may be cleaned most effectively with compressed dry air. Always wear safety goggles when cleaning tools with compressed air. Do not attempt to clean by inserting pointed objects through openings. **CAUTION** and solvents damage This will prevent excessive voltage drop, loss of power or overheating. Grounded tools must use 3wire extension cords that have 3prong plugs and receptacles.
