A bit big on bass with neutral tame mids and a slight treble bump but with the right speakers its a big healthy chunky warm sound. I almost dont miss the

tuner its so good. Rotelish i guess. It is a bit different and may not be the best match with all speakers.

<http://drbillbaker.com/images/briggs-rebuild-manual.pdf>

I like its extended extremes and overall pleasing sound profile. Sounds quite good with klipsch fortes but not quite as punchy as some nad amps. I like mine a lot. Try one. Even the 340 and 540 sound great. Thumbs up cambridge audio. Reviewed Feb 18th, 2016 by Blatte Worth every penny !

Comments I would say clinical sound for my taste. There seem o be others that have looked for it but none seem to have found it yet PleaseThe main differences for the power amplifiers, are the power transformer and rail voltages, separate headphone amplifier and the MCU type and firmware which is integrated with the protection circuits. Note that the power amplifiers themselves, used the obsolete Sanken SAP15 Darlington output transistors and any existing problems there, may not be simple to resolve as it will now require a modification to fit the STD02 replacement types along with additional, external emitter resistors. Dont take chances with alleged NOS Sanken parts even these are faked, as I found in a 640A that came to me for a second repair, some years ago.The main differences for the power amplifiers, are the power transformer and rail voltages, separate headphone amplifier and the MCU type and firmware which is integrated with the protection circuits. Interesting thread link though thanks.Electrolyte is a viscous substance that darkens to a sticky mess as it dries out, more like foodstuff.Electrolyte is a viscous substance that darkens to a sticky mess as it dries out, more like foodstuff. However, when I was peering at the board and cleaning up the mess I did spot that R42 100K was heavily discoloured and open cct and that another, R48, was also looking at least to me that it was showing signs of stress it was partially discoloured in the same was as R42.

There is a YT video from some chap who had commented on R42 and he too reckons its glue and suspects that the glue has had an effect on R42. Sounds like I might be able to get it working again without too much effort.They are known to overheat. Simply use a higher wattage resistor there.They are known to overheat. It has been my contention for quite some time that having a good diagram of the way that visual input gets into the brain can result in greater cognitive skills. The sort of visualization used is important in addition to the level of visual abstraction. Most of us use pictures and other visual input to improve our comprehension of things, ideas and events in our life. And most of us use various forms of visualization to help us decide what to do and how to get it done. What needs to be recognized is that there are a variety of kinds of visual input and that the majority of these types of inputs have their own significance and purpose. A very important fact about visual inputs is they are objective way of input isnt used.

<http://www.psstrecno.sk/wp-content/plugins/formcraft/file-upload/server/content/files/1626fa24247a3f--bose-acoustimass-6-speaker-system-manual.pdf>

If you would like to know about objective visual inputs, you should begin by reading the introduction to eyesight and perception. This subject will then have a debate about the role of vision and understanding in an individuals life. This topic will then explain various types of brain processes involved in visual processing. As I wrote in my initial paragraph, you need to recognize that eyesight and perception are all critical processes in life. One of the most essential facets of perception and vision are described in the introduction to visual processing. You ought to read this topic if you want to understand how different kinds of visual processing results in different types of perceptions. These are processes which take place with respect to how the brain interprets information and generates theories. The vast majority of visual processing can be heard without relying on learning or textbooks from different sources. In addition to this, you should start by learning about the different types of visual input signals. You should read the introductory chapter to eyesight and perception and review this subject. You should then read the introduction to visual processing to learn about various kinds of visual processes that happen in the brain. The key to being successful at this would be to learn what every type of procedure is and the manner in which it works. You also need to learn what visual processes occur in the mind. You ought to read the introduction to visual processing and examine this subject. In addition, you need to read the introduction to perception, which will explain the visual systems exist to accomplish perception. While this is accurate, the more you understand about how visual processes are processed and the manner in which they function, the better you will be able to know about the brain and the manner in which it processes data.
